

Highly Durable System for Protection Against Extreme Abrasion

BELZONA®
9811

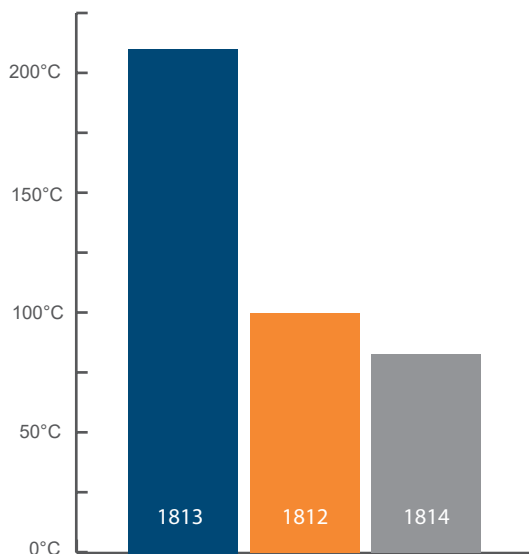

Belzona 9811 is an alumina tile sheet that is easily installed to create a hard-wearing, abrasion-resistant lining capable of forming many different contours. Belzona offers a wide range of materials that can be used for bonding and grouting the tiles, depending on the operating conditions and substrate geometry.

The alumina tiles are produced from an extremely pure micro-crystal aluminium oxide sintered at high temperature. The alumina oxide used to manufacture the tiles has a hardness of 9 on the Mohs scale.

Tiles are supplied on a bonded mat for ease of installation. Pack sizes vary by location, please check with your local Belzona representative for coverage area and pack size.

BELZONA GROUTING MATERIAL SELECTOR

HOW TO USE

Key Benefits:

(When used in conjunction with Belzona 1000 series products)

● Simple

- No specialist tools required
- Convenient design for fast and easy application

● Safe

- Ambient temperature cure ensures no fire risk
- Solvent free
- No dust

● Versatile

- No shrinkage, expansion or distortion
- Suitable for application onto many geometric shapes
- Bonds to most rigid substrates including steel and cast iron

● Effective

- High wear resistance
- Broad service temperature range
- Resistant to a wide range of chemicals
- Does not corrode

Application Areas:

- | | |
|--------------------|----------------|
| • Centrifuges | • Impellers |
| • Chutes | • Mixing bowls |
| • Cyclones | • Nozzles |
| • Deflector plates | • Pipe bends |
| • Hoppers | • Wear plates |
